DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 21, 2002 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 26, 28-34, 39-40, 48 are rejected under 35 U.S.C. 102(b) as being anticipated by CN 1,104,610 using Derwent abstract 1997-311,227 for the English abstract.

CN '610 discloses a bag for generating chlorine dioxide used to disinfect drinking water, fruit and vegetables, which is manufactured by steps including (1) melting Chinese wax, stearic acid, bees wax or paraffin wax; (ii) adding sodium chlorite to form microcapsules; (iii) mixing the dry tartaric acid or oxalic acid particles; and (iv) placing the mixture into a cloth bag (note English abstract). The cloth bag is considered as the claimed water insoluble membrane. When the bag is placed in water, the bag is considered as the second zone and the water is considered as the first zone. Since the tartaric acid as used in CN '610 is the same as the one used in the claimed invention, the pH of the tartaric acid when dissolved in water would inherently be below about 5 as

Art Unit: 1754

required in the instant claim 39 and the produced aqueous solution of chlorine dioxide would inherently have the same pH as required in the instant claim 40.

For the limitation of "at least a portion of said at least one metal chlorite and at least one acid forming component being in direct contact", the disclosed microcapsules in CN '610 are considered as the claimed "metal chlorite" because in claim 26 does not excluded a coated metal chlorite. It should be noted that the presence of the wax binder in the metal chlorite is disclosed (note page 19, lines 13-17). Alternatively, the stearic acid can be the second acid forming component, thus some of the metal chlorite would be in direct contact with the stearic acid.

The bag containing the mixture of wax, sodium chlorite and tartaric acid as disclosed in CN '610 anticipates the claimed device.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 26-59 are rejected under 35 U.S.C. 103(a) as being unpatentable over CN '610.

The CN '610 discloses that the wax and the chlorite were formed into microcapsules, however, no size was disclosed.

However, the microcapsules as disclosed in CN '610 can be considered as tablets, powders, granules, pellets or agglomerates depending on its size and shape, especially because a wax (i.e. a binder) was used. It would have been obvious to one

Art Unit: 1754

ordinary skill in the art to optimize the size of the microcapsules of CN '610 in order to obtain the best results.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Ngoc-Yen Nguyen whose telephone number is (703) 308-2536. The examiner is currently on a part time schedule.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Stanley Silverman, can be reached on (703) 308-3837. The fax phone number for this Group is (703) 872-9311 (for OFFICIAL After Final amendment only) or (703) 872-9310 (for all other OFFICIAL faxes). UNOFFICIAL fax can be sent to (703) 305-6078.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.
